

## Red/Blue Puzzle

### Rules

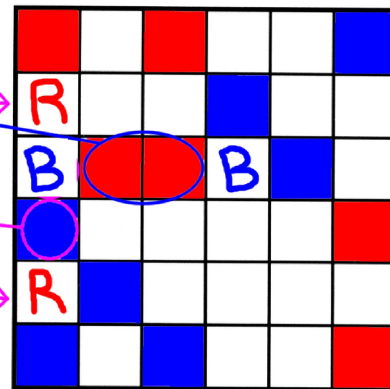

1. Each box is either **red (R)** or **blue (B)**.
2. You cannot have more than two matching colours together (in either or a row or a column). "RR" is allowed. "RRR" is not!
3. Each row and each column should contain an equal number of red and blue squares.
4. Each row is unique and each column is unique.

### Puzzle #1 (and example)

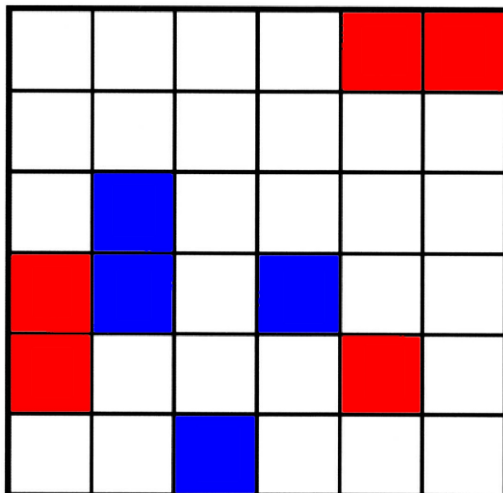

1) There are two **reds** in a row.  
There can't be three, so we  
need **blue** on either side.

2) Now there are three **blues**  
in the first column. Hence  
the remaining spots must be all  
**reds** (equal numbers).

3) Now you keep going...

### Puzzle #2

### Puzzle #3
